

Momentum Works Everywhere

Across a diverse set of global equities and multiple market capitalizations, we conducted an analysis of 32 distinct long-only factors, including momentum, value, growth, quality, and the market. Notably, momentum demonstrated exceptional performance, surpassing the respective market return in 100% of the samples. Furthermore, momentum consistently yielded the highest excess returns, outperforming other factors in 91% of the samples. Impressively, it also exhibited superior risk-adjusted returns (Sharpe ratio) in 75% of the samples, emphasizing its ability to generate favorable returns with lower associated risk. Additionally, when assessing significance at the 90% level, momentum displayed statistically significant excess returns in 72% of the samples, surpassing all other factors tested in this regard. These findings collectively underscore the robust and reliable performance of momentum as a factor across various market geographies and capitalizations.

Summary Statistics

Momentum exhibited superior risk-adjusted returns (Sharpe ratio) in 75% of the samples, emphasizing its ability to generate favorable returns with lower associated risk. Impressively, momentum demonstrated exceptional performance, surpassing the respective market return in 100% of the samples. Furthermore, momentum consistently yielded the highest excess returns, outperforming other factors in 91% of the samples.

When assessing significance at the 90% level, momentum displayed statistically significant excess returns in 72% of the samples, surpassing all other factors tested in this regard.

Figure 3: Factor Significance, T-Stat (Excess Return)

The following sections provide more detailed analysis of momentum’s performance and risk within global equity markets compared to value, growth, quality, and the market for 32 distinct geographies and size categories. Time periods for this analysis use the full data set available in the Fama-French data library which may vary by geography.

US Equity Markets

Analyzing US data from July of 1963 to August of 2023 (the total data set available to incorporate all factors), we employ quintiles x quintiles for the portfolio sorts. Momentum utilizes the top 20% of prior-year return (excluding the most recent month) rebalanced monthly, while value and growth use the top and bottom book-to-market quintiles, respectively. Quality is determined by the top quintile of operating profitability¹. Aggregation across the quintiles uses average historical market cap weights. The All Cap portfolio uses: Q1 – 2%, Q2 – 3%, Q3 - 6%, Q4 – 12%, and Q5 – 77%. Large Cap is exclusively Q5 – 100%, Mid Cap is Q4 – 100%, Small Cap includes Q1 – 17.5%, Q2 – 29%, Q3 -53.5%, and Micro Cap comprises of Q1 – 36%, Q2 – 64%.

Summary: Momentum had the highest excess returns, highest risk-adjusted returns, and highest t-stat of excess returns among all the factors tested and throughout market capitalization ranges².

Table 1: Factor Performance, US All Cap

July 1963 – August 2023

	Momentum	Value	Growth	Quality	Market
Return (Annualized)	14.04%	11.85%	10.36%	12.04%	10.37%

European Equity Markets

The sample data spans from July 1991 to August 2023. For country grouping portfolios, securities are sorted into large and small cap stocks. Large caps represent the top 90% of market cap for the region, while small caps are in the bottom 10%. Sorting criteria include book-to-market, prior one-year return (excluding the most recent month), and operating profitability. The top 30% of each sorted characteristic forms the value, growth, momentum (rebalanced monthly), and quality portfolios. The Large Cap and Small Cap portfolios are then market cap weighted to create the All Cap portfolio. Refer to table A1 for country grouping constituent definitions.

Summary: Momentum had the highest excess returns, highest risk-adjusted returns, and highest t-stat of excess returns among all the factors tested and throughout market capitalization ranges.

Table 6: Factor Performance, Europe All Cap

July 1991 – August 2023

North American Equity Markets

The sample data spans from July 1991 to August 2023. For country grouping portfolios, securities are sorted into large and small cap stocks. Large caps represent the top 90% of market cap for the region, while small caps are in the bottom 10%. Sorting criteria include book-to-market, prior one-year return (excluding the most recent month), and operating profitability. The top 30% of each sorted characteristic forms the value, growth, momentum, and quality portfolios. The Large Cap and Small Cap portfolios are then market cap weighted to create the All Cap portfolio. Refer to table A1 for country grouping constituent definitions.

Summary: Momentum had the highest excess returns among tested factors throughout market capitalizations. In North America Small Cap, momentum also had the highest t-stat and risk-adjusted returns. However, in North America All Cap and North America Large Cap, quality had a slight edge over momentum with higher t-stats and risk-adjusted returns.

Table 9: Factor Performance, North America All Cap

Japanese Equity Markets

The sample data spans from July 1991 to August 2023. For country grouping portfolios, securities are sorted into large and small cap stocks. Large caps represent the top 90% of market cap for the region, while small caps are in the bottom 10%. Sorting criteria include book-to-market, prior one-year return (excluding the most recent month), and operating profitability. The top 30% of each sorted characteristic forms the value, growth, momentum, and quality portfolios. The Large Cap and Small Cap portfolios are then market cap weighted to create the All Cap portfolio. Refer to table A1 for country grouping constituent definitions.

Summary: While momentum did outperform the market based on annualized returns over the data set and throughout market capitalizations, it did so at a low confidence level. Value had the highest excess return, highest risk adjusted returns, and highest t-stat among the factors tested in Japan throughout market capitalizations.

Table 12: Factor Performance, Japan All Cap

July 1991 – August 2023

	Momentum	Value	Growth	Quality	Market
Return (Annualized)	3.37%	4.86%	0.78%	2.58%	2.44%

Asia Pacific ex-Japan Equity Markets

The sample data spans from July 1991 to August 2023. For country grouping portfolios, securities are sorted into large and small cap stocks. Large caps represent the top 90% of market cap for the region, while small caps are in the bottom 10%. Sorting criteria include book-to-market, prior one-year return (excluding the most recent month), and operating profitability. The top 30% of each sorted characteristic forms the value, growth, momentum, and quality portfolios. The Large Cap and Small Cap portfolios are then market cap weighted to create the All Cap portfolio. Refer to table A1 for country grouping constituent definitions.

Summary: Momentum had the highest excess return and risk-adjusted returns (Sharpe ratio) among all factors tested and across market capitalizations in Asia ex-Japan Equity markets. However, in Asia Pacific ex-Japan Large Cap, value had a higher t-stat of excess returns.

Table 15: Factor Performance, Asia Pacific ex-Japan All Cap

July 1991 – August 2023

Developed Equity Markets

The sample data spans from July 1991 to August 2023. For country grouping portfolios, securities are sorted into large and small cap stocks. Large caps represent the top 90% of market cap for the region, while small caps are in the bottom 10%. Sorting criteria include book-to-market, prior one-year return (excluding the most recent month), and operating profitability. The top 30% of each sorted characteristic forms the value, growth, momentum, and quality portfolios. The Large Cap and Small Cap portfolios are then market cap weighted to create the All Cap portfolio. Refer to table A1 for country grouping constituent definitions.

Summary: Momentum had the highest excess returns among tested factors throughout market capitalizations. However, quality exhibited slightly higher risk-adjusted returns and t-stats of excess returns in Developed All Cap and Large Cap. Still, momentum had the highest risk-adjusted returns and t-stats in Developed Small Cap.

Table 18: Factor Performance, Developed All Cap

Global Equity

We construct the Global portfolios as weighted averages of the corresponding developed portfolio and emerging markets portfolio. The Global portfolios use 88% weight on developed and a 12% weight on emerging markets³.

Summary: Momentum had the highest excess returns among all factors tested and throughout market capitalizations. In addition, momentum exhibited the highest risk-adjusted returns (Sharpe ratio) in Global All Cap and in Global Small Cap, while quality was essentially tied with momentum in Global Large Cap. As far as t-stats, quality wins in Global All Cap and Large Cap, while momentum wins in Global Small Cap.

Table 27: Factor Performance, Global All Cap
July 1991 – August 2023

	Momentum	Value	Growth	Quality	Market
Return (Annualized)	10.66%	8.42%	7.46%	9.76%	8.13%

Global ex-US Equity

We construct the Global portfolios as weighted averages of the corresponding developed portfolio and emerging markets portfolio. Global ex-US portfolios use a weight of 75% on developed ex-US and 25% weight to emerging markets.

Summary: Momentum had the highest annualized excess returns and risk-adjusted returns (Sharpe ratio) among all factors tested and throughout market capitalizations. However, quality had a slightly higher t-stat of excess returns in Global ex-US Small Cap.

Table 30: Factor Performance, Global ex-US All Cap

July 1991 – August 2023

In Table A2, we label (in bold) the highest t-statistic for each region and cap range. In terms of significance at the 90% level: Momentum's excess returns are significant in 23 of the 32 (72%) test cases. Quality is close behind with 69% of test cases indicating significance. Value comes next at 56%, with growth being either statistically indistinguishable from zero or having significant negative excess returns in all the test cases. In terms of the horse race, momentum wins 56% of the time, while quality and value win 25% and 19% of the time, respectively.

Table A2: Statistical Significance Across Geographic and Market Cap Ranges

	T-Stat (Excess Returns)			
United States	Momentum	Value	Growth	Quality
US All Cap	3.56	1.40	0.36	3.19

About EAM

EAM Investors is solely focused on delivering alpha for clients in global equity markets. A momentum-driven approach to investing leverages their collective insight within a systematic process designed to deliver consistent and predictable outcomes. EAM's Informed Momentum® investment process has been applied consistently across all strategies since inception of the firm in 2007.

About the Authors

Travis Prentice

Travis is CEO and Chief Investment Officer of EAM Investors, a firm he co-founded in 2007. In addition, he is Portfolio Manager for EAM's US and Global strategies, as well as an analyst across all EAM's strategies. Prior to founding EAM, Travis was a Partner, Managing Director and Portfolio Manager with Nicholas-Applegate Capital Management where he had lead portfolio management responsibilities for their Micro and Ultra Micro Cap investment strategies and a senior role in the firm's US Micro/Emerging Growth team. He has 25 years of institutional investment experience specializing in momentum-based strategies. He holds an MBA from San Diego State University and a BA in Economics and a BA in Psychology from the University of Arizona.

David Wroblewski, PhD

David is Director of Applied Research at EAM Investors. Prior to joining EAM in 2021, David was Director of Research at Denali Advisors, an institutional equity manager with US and Non-US strategies. He has additional experience in research and risk management from Nicholas-Applegate Capital Management. David also serves as an Adjunct Instructor in the Department of Mathematics at San Diego City College. He has over 15 years of investment experience. David received a Ph.D. in Mathematics at the University of California, San Diego, a Master of Science in Applied Mathematics and a Bachelor of Science in Applied Mathematics from San Diego State University. David has published papers in the Journal of Investment Management, Financial Analyst Journal, and Applied Economics, among other financial publications. He has been awarded the "Harry M. Markowitz, Special Distinction Award" from The Journal of Investment Management.

Please note, EAM Global Small Companies Fund (APIR ETL1755AU) is made available to Australian investors through a partnership between the investment manager SGH Hiscock & Company (Australia) and the fund manager EAM Global Investors (US).

The EAM Global Small Companies Fund is denominated in Australian dollars and its universe is global listed small companies excluding Australia. The EAM Global Small Companies Fund is replicating the approach applied by EAM Investors for EAM Global Opportunities Fund. The EAM Global Opportunities fund, however, includes Australian companies among its investments and is denominated in US dollars.

EAM Global Opportunities Fund's performance figures are indicative of the historical performance of the Informed Momentum methodology as applied to Global Small Companies universe, but do not represent historical performance of the EAM Global Small Companies Fund offered in Australia.

The EAM Global Small Companies Fund is available in Australia, distributed by SG Hiscock & Company through the SGH Partnership Program.

About SG Hiscock & Company

SG Hiscock & Company is a boutique fund manager specialising in high conviction actively managed investment strategies and Managed Discretionary Portfolios. SG Hiscock was established in Melbourne in 2001 by six of its principals and is entirely owned by directors, staff and associates. The head office is based in Melbourne and has an office in Sydney. In 2016, the retail distribution and marketing for its funds was transitioned in-house and the firm now has a dedicated distribution team. In early 2019, SGH merged with highly regarded specialist discretionary portfolio manager, DMP Asset Management. SG Hiscock & Company commenced the SGH Partnership Program in June 2020. Combined with the SGH existing suite of Australian equity and Australian REITs (Real Estate Investment Trusts), the addition of the Partnership Program broadens our capabilities across Global REITs and Global Equities for Australian retail investors.

About EAM Global Investors LLC

EAM Global Investors LLC ("EAM Global") is an investment management firm solely focused on delivering alpha for clients in global equity markets through its Informed Momentum® investment approach. EAM Global is a subsidiary of EAM Investors, LLC (together known as "EAM"). EAM's momentum-driven approach to investing leverages their collective insight within a systematic process designed to deliver consistent and predictable outcomes. This Informed Momentum® investment approach combines momentum with stock selection, tailored risk management, and efficient implementation to deliver alpha for clients. EAM aims to generate alpha by harnessing the power of the momentum premium, exploiting behavioural biases around new information, assessing the rationale behind improving/accelerating company financial performance, and by constantly addressing portfolio risk. The firm's time-tested philosophy and investment approach has been applied consistently across all strategies since inception in 2007. As of 6/30/2023, EAM manages \$2.2 billion on behalf of its clients. EAM is headquartered in Solana Beach, CA, USA.
